## Upper Attachment of the Rear Rack:

At the drillings (mounting points) of the original retainer (grab rail), mount the rear rack with the socket-head cap screws M 8 x 55 and M 6 x 50. The aluminum spacers in the appropriate diameters are between-added (rack & mounting points on the body).

## Lower Attachment of the Rear Rack:

The lower arms of the rear rack are installed over the fender at the original Blinker mounting points. Use the hexagonal screws M 6 x 20 together with washers and Body Disks (placed from the inside).

The turn signals are installed like original at the mounting points on the lower arms of the rear rack. The original cables will have to be moved but do not require to be extended.

Note: The luggage bridge is suitable for the assembly of the Hepco & Becker Top Cases by means of quick-locking mechanism. The luggage bridge can be supplemented by a separately mountable luggage carrier (article number 650,138).

**Check all screw connections after the assembly for tightness!**

**Please read and consider our included service information**
